Frequently Asked Questions

World Interest Rate Probability | WIRP <GO>

WIRP <GO> estimates the expected path of policy rate changes, so you can align your trading strategies with likely rate hikes or cuts.

World Interest Rate Probability			Set Default	Export
Hide Models	<<			
Model	Meeting	%Hike/Cut	Region: United States »	
North America			Target Rate	3.75
US - Fut	07/29/2026	+33.7%▲	Effective Rate	3.63
US - OIS	07/29/2026	+32.7%▲		
CA - OIS	07/15/2026	-5.3%▼		
Europe			Meeting	#Hikes/Cuts
EZ - OIS	07/23/2026	+5.9%▲	07/29/2026	+0.337
GB - OIS	07/30/2026	+8.4%▲	09/16/2026	+0.843

			04/28/2027	+1.627

Click through a tour of WIRP 

Quick Start

1. Select the model you want to analyze (e.g., *US - Fut*).

World Interest Rate Probability			Set Default	Export
Hide Models	<<			
Model	Meeting	%Hike/Cut	Region: United States	
North America			Target Rate	
US - Fut	07/29/2026	+33.7%▲	Effective Rate	
US - OIS	07/29/2026	+32.8%▲		
CA - OIS	07/15/2026	-5.3%▼		
Europe			Meeting	
EZ - OIS	07/23/2026	+5.5%▲	07/29/2026	
			09/16/2026	
			10/28/2026	

The table on the right of the screen populates with data for the selected model.

2. Enter a **Pricing Date** to determine the range of meeting data that appears. WIRP displays central bank meeting data for all the upcoming meetings that were available on the specified Pricing Date (the current date appears by default).

■ Enable Overrides			
Instrument: Fed Funds Futures »			
Pricing Date	06/30/2026		
Cur. Imp. O/N Rate	3.628		
%Hike/Cut	Imp. Rate Δ	Implied Rate	A.R.M. ▲
+33.7%	+0.084	3.713	0.250
+50.6%	+0.211	3.839	0.250
+21.4%	+0.264	3.892	0.250

3. Analyze the data: You can click through for more information about a **Region** or **Instrument** or click any **Meeting Data** point to see a historical line chart. You can also **Override** certain values to enter your own rates or move sizes.

Meeting Data

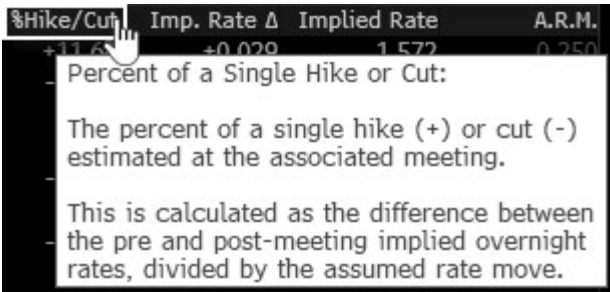

Meeting Data

For more on the data table: [Analyzing Meeting Data](#).

You can now use WIRP data to analyze the impact of market events on expected central bank interest rate changes.

Getting Hints as You Go

On any Bloomberg function, you can mouse over key items for more information:

Workflows

Analyzing Meeting Data

You can use WIRP data to analyze the impact of market events on expected central bank interest rate changes.

Once you have selected a model and set a pricing date, review the data in the **Meeting Data** table.

Region: United States »			Instrument: Fed Funds Futures »		
Target Rate	3.75		Pricing Date	06/30/2026	
Effective Rate	3.63		Cur. Imp. O/N Rate	3.628	
■ Enable Overrides					
Meeting	#Hikes/Cuts	%Hike/Cut	Imp. Rate Δ	Implied Rate	A.R.M.
07/29/2026	+0.337	+33.7%	+0.084	3.713	0.250

07/28/2027	+1.357	-14.4%	+0.339	3.967	0.250
09/15/2027	+1.175	-18.2%	+0.294	3.922	0.250

- **Meeting:** The dates of central bank meetings. The table displays meetings for one year prior to the *Pricing Date*.
- **#Hikes/Cuts:** The number of hikes or cuts expected, or "priced in", at the corresponding meeting.
- **%Hike/Cut:** The percentage of a hike or cut expected at the corresponding meeting. For example, the image above shows that 4.7% of a 25 bps hike is priced in for the 12/11/2019 meeting. The first full cut (1.216 cuts) is priced in at the 11/05/2020 meeting, and 41.2% of a cut is expected on that meeting day.
- **Imp. Rate Move:** The change in overnight rate expected by the corresponding meeting.
- **Implied Rate:** The overnight rate expected after the corresponding meeting.
- **Assumed Rate Move (A.R.M.):** The expected size, in basis points (BPS), of the central bank's hike or cut.

Loading Tickerized Data

WIRP tickers allow you to load WIRP data in other functions and quickly switch between available countries, instruments, and methodologies.

WIRP tickers are comprised of a country/model, a data type, and an optional date. For example, the ticker **USOAFR DEC2018 Index** loads the implied overnight rate for the US Futures market for December 2018.

There are three ways to leverage a ticker in WIRP:

- Click a data point in the meeting data table to launch a chart of historical data in the *Line Chart* (GP) function.

Instrument: Fed Funds Futures »				
Pricing Date		06/30/2026		
Cur. Imp. O/N Rate		3.629		
%Hike/Cut	Imp. Rate Δ	Implied Rate	A.R.M. ▲	
+31.5%	+0.079	3.708	0.250	
+51.8%	+0.208	3.837	0.250	
+20.8%	+0.259	3.887	0.250	
+36.9%	+0.351	3.980	0.250	
+7.1%	+0.369	3.998	0.250	

- Right-click a data point and select an option to load the ticker and analyze the data in a related function.

Instrument: Fed Funds Futures »				
Pricing Date		06/30/2026		
Cur. Imp. O/N Rate		3.629		
%Hike/Cut	Imp. Rate Δ	Implied Rate	A.R.M. ▲	
+31.5%	+0.079	3.708	0.250	
+51.8%	+0.208	3.834	0.250	
+20.8%	+0.259	3.887	0.250	
+36.9%	+0.351	3.977	0.250	
+7.1%	+0.369	3.998	0.250	
		4.032	0.250	
		4.028	0.250	
		3.999	0.250	
		3.963	0.250	
		3.917	0.250

- When you are analyzing WIRP data in a supported function (e.g. GP), you can enter different WIRP tickers to switch between data sets.

The following table lists the available tickers for WIRP data:

Country/Model	Percent of Hike/Cut	# of Hikes/Cuts	Implied Overnight Rate	Current Overnight Rate
Australia - Futures	AU0APR Index	AU0ANM Index	AU0AFR Index	AU0ACR Index
Canada - OIS	CA0BPR Index	CA0BNM Index	CA0BFR Index	CA0BCR Index
Chile - OIS	CL0BPR Index	CL0BNM Index	CL0BFR Index	CL0BCR Index

Country/Model	Percent of Hike/Cut	# of Hikes/Cuts	Implied Overnight Rate	Current Overnight Rate
Euro Zone - OIS	EZ0BPR Index	EZ0BNM Index	EZ0BFR Index	EX0BCR Index
India - OIS	IN0BPR Index	IN0BNM Index	IN0BFR Index	IN0BCR Index
Japan - OIS	JP0BPR Index	JP0BNM Index	JP0BFR Index	JP0BCR Index
New Zealand - OIS	NZ0BPR Index	NZ0BNM Index	NZ0BFR Index	NZ0BCR Index
Norway - OIS	NO0BPR Index	NO0BNM Index	NO0BFR Index	NO0BCR Index
Sweden - OIS	SE0BPR Index	SE0BNM Index	SE0BFR Index	SE0BCR Index
Switzerland - OIS	CH0BPR Index	CH0BNM Index	CH0BFR Index	CH0BCR Index
United Kingdom - OIS	GB0BPR Index	GB0BNM Index	GB0BFR Index	GB0BCR Index
US - Futures	US0APR Index	US0ANM Index	US0AFR Index	US0ACR Index
US - OIS	US0BPR Index	US0BNM Index	US0BFR Index	US0BCR Index

Exporting

You can export the meeting dates and rate data for the selected model to a Microsoft® Excel spreadsheet for your own analysis.

1. Specify a pricing date:

- If you want your spreadsheet to update with live data, specify the current date, which exports the data as **BDP** formulas.
- If you want to export a snapshot that does not update with live data, specify a past pricing date, which exports the data as **BDH** formulas.

2. Click the **Export** button.

Accessing Estimates on Mobile

You can access interest rate estimates from WIRP on the Bloomberg Professional® app, so you can monitor the expected path of policy changes from anywhere.

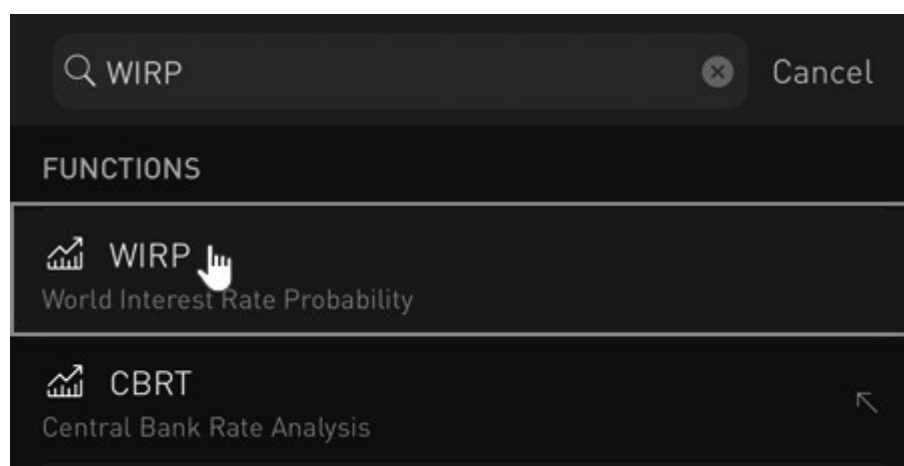

To see WIRP estimates on your mobile device:

1. At the bottom left of the app, tap **Search**.

The *Search Bloomberg* field appears at the top of the app.

2. Enter **WIRP**, then select the function.

The *World Interest Rate Probability* screen appears.

3. If you want to display a model's estimate in greater detail, tap the corresponding row (e.g., *US - Fut*).

< Markets World Interest Rate Probability		
Model ⓘ	Meeting ⓘ	%Hike/Cut ⓘ
North America		
US - Fut 	12/18/2024	-62.1%
US - OIS	12/18/2024	-43.6%
CA - OIS	12/11/2024	-141.9%
Europe		
EZ - OIS	12/12/2024	-123.1%
GB - OIS	12/19/2024	-16.8%

A table appears with more details about the selected model.

BQL for WIRP

The following table contains spreadsheets and notebooks created by Bloomberg to assist you with performing

analysis on implied policy rates using the Bloomberg Query Language (BQL).

Type	Title	Description
	BQL for WIRP	An introduction to using BQL for custom analysis on the implied overnight rates displayed in WIRP.
	Sample BQuant Notebook: Implied Overnight Rate Curve Evolution	A sample BQuant notebook that demonstrates how to use BQL to create a chart showing the implied overnight rate curve at different points in time. For more on BQuant: BQIQ <GO> .

Brochures & Videos

The following brochures and videos provide additional information about WIRP and related functionality.

Type	Title	Description
	WIRP Demo Video (0:48)	An introduction to using WIRP, which estimates the expected path of policy rate changes, so you can align your trading strategies with likely rate hikes or cuts.

Definitions

Term	Definition
Assumed Rate Move (A.R.M)	The assumed size of a standard rate hike or cut by the chosen central bank.
BDH	Bloomberg Data History (BDH) formulas allow you to import historical data for a selected security in Microsoft® Excel.
BDP	Bloomberg Data Point (BDP) formulas allow you to import a single data point of current or continuously updating, real-time data to a single cell in your Excel spreadsheet.
Current Implied Overnight Rate	The overnight interest rate expected to prevail from now until the first (upcoming) central bank meeting.
Enable Overrides	Allows you to enter custom data for the WIRP calculations.
Futures	Contracts that settle to the average effective rate over a pre-defined period (often 1 month).
Implied Overnight Rate	The overnight interest rate expected to prevail after the corresponding central bank meeting.
Implied Overnight Rate Change	The implied change in the overnight rate from today until the corresponding central bank meeting.

Term	Definition
Instrument	The asset from which WIRP derives its forward rates and implied data.
Meeting	The date(s) of the upcoming central bank meeting(s). The date on which the monetary authority announces its policy rate outcome. Meeting dates are always displayed in the central bank's local time.
Model	The distinct combination of a market instrument and geographic region that defines the WIRP output.
Number of single hikes/cuts	The number of single hikes or cuts expected by the corresponding meeting.
Overnight Index Swaps (OIS)	Fixed to float swaps based on the accrual of interest where the float settles to the region's effective rate.
Percent of Single Cut/Hike	The percent of a single hike or cut expected at the corresponding meeting.
Pricing Date	The market date of the chosen instrument.
Target Rate	The rate (or upper bound of the range) explicitly targeted by the central bank.

Frequently Asked Questions

Get answers to the most commonly asked questions.

Where can I find central bank meeting dates?

To find the meeting dates for a central bank, enter {WIRP <GO>} to access the *World Interest Rate Probability* function. Then, from the list on the left side of the screen, select a country/model. On the right side of the screen, the meeting table updates with upcoming meeting dates.

Note: If you want to find a historical meeting date, enter a past date in the *Pricing Date* field.

How do I chart or analyze data from WIRP with other functions?

WIRP data is tickerized, so you can quickly load it in other functions for further analysis. To launch a ticker in the *Line Chart* (GP) function, click a label or value in the data grid. For other related functions, right-click a value and make a selection (e.g., *DES-Description*). For more, including a list of available tickers: [WIRP Help Page > Loading Tickerized Data](#).

Where can I use WIRP tickers?

You can use WIRP tickers in supported functions on the Bloomberg Terminal® or in Microsoft® Excel. For example, you can load WIRP tickers in the *Intraday Price Chart* (GIP) function for intraday data or in Excel to build your own WIRP screen. For more: [WIRP Help Page > Loading Tickerized Data](#).

Note: You may have data limits in Excel.

In WIRP, why does OIS data react faster than futures data?

Bloomberg has a contract with the CME and ASX (futures) exchanges to post the latest values on a 10-minute delay. Even if you pay CME for live data access, WIRP still operates on a 10-minute delay due to these contractual obligations. For faster update speeds, change your default model to OIS.

How is WIRP data calculated?

Bloomberg uses the underlying structure of the selected instrument and calendar logic to arrive at implied overnight rates, then calculates the additional data using algebra based on known assumptions. For more on how Bloomberg derives the data displayed in WIRP: [WIRP Help Page > Calculations](#).

Can I use my own calculations in WIRP?

Yes. At the top-right of the WIRP screen, select *Enable Overrides*, then input your own implied overnight rates or assumed rate move sizes. For example, if WIRP indicates that the Fed is going to move by 25 bps, but you think otherwise, you can override the default and use your own assumptions.

In WIRP, why doesn't the pricing date match the meeting date?

The data in WIRP is based on live pricing market data. WIRP follows the market conventions for that data, including the pricing date. The U.S. Futures market is active 23 hours a day and closes at 6 p.m. EST. The U.S. OIS market is active 24 hours a day and closes at 5 p.m. EST. Post-close trades generally process the next day. Thus, when you run a WIRP model after market close, you will see dates for the next day.

Do I need to refresh my screen to see new data in WIRP?

No, the screen automatically refreshes with new data once a minute.

Why can't I see Options/Eurodollar models in WIRP?

Bloomberg removed support for these models in September 2019 due to limited use.

Why can't I see predictions in WIRP for all scheduled meeting dates?

The calculations behind WIRP rely on a liquid OIS swaps or futures curve, with monthly granularity. If there is no reliable pricing on all monthly tenors beyond a certain point on the curve, WIRP does not show meeting dates beyond that point.

Note: You can still see all meeting dates by running [ECO <GO>](#).

Take the next step.
